

# SafeMask®

Medical Masks Type IIR

Made in EU

Because we want  
to set standards

# Highest safety without compromise

## Splash-resistant

Medical protective masks Type IIR have excellent, liquid-resistant inner and outer nonwovens that provide a safe barrier against spray, splashes and particles.

## Superior comfort

Latex-free Medicom type IIR masks offer unsurpassed comfort. SofSkin masks with a super-soft inner layer are especially recommended for users with sensitive skin.

## Anti-fog effect

Most masks are available in a „fog-free“ version with a special stripe on the nosepiece which prevents fogging goggles and/or visors.

## Bacterial filtration efficiency

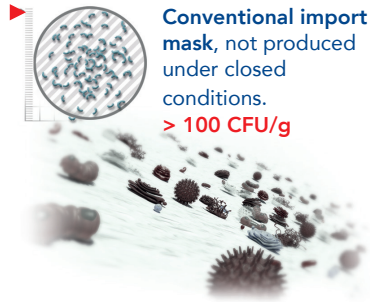

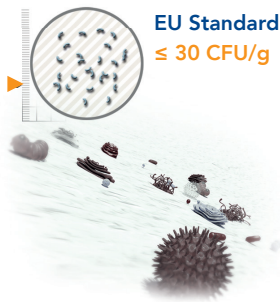

The high filtration efficiency (BFE) of the masks provides a safe barrier against bacterial contamination.

## Exceptional Breathability

The breathability of the masks is unique in the market, exceeding the requirements of the standard EN 14683: 2019.

# Highest standards exceeded

**Leptrex** produces face masks in Europe under clean room conditions ISO Class 7. This high standard underlines **Leptrex's** commitment to quality to the microbiological cleanliness – the bioburden – of the masks. The aim of the bioburden determination is to measure the population of viable microorganisms on a mask and its packaging. It must be less than 30 CFU (Colony Forming Units) per gram. Medicom masks undercut these requirements significantly.

# The double barrier

Medical Masks Type IIR provide a physical barrier preventing other people from being exposed to bacteria and at the same time shielding the wearer from biological fluids, spray, splatter and airborne particles.
